

IntelaTrac[®] System Overview

Accelerate Your IntelaTrac Implementation

IntelaTrac Assessment Program

The IntelaTrac Assessment Program is a 2 day assessment to evaluate site readiness for an IntelaTrac implementation. Front end studies include all site assessment activities as well as, assisting with your value justification for an IntelaTrac implementation.

IntelaTrac Quick Start Program

The IntelaTrac Quick Start Program is a focused consulting engagement which will have IntelaTrac up and running in your facility in 30 days*.

This unique IntelaTrac Quick Start program delivers a complete system, rather than simply a rapid prototype or “proof of concept”, and includes configuration and implementation of all major IntelaTrac Modules with training for your project team.

The Industry Leading Mobile Workforce & Decision Support System

IntelaTrac accelerates and sustains operational process improvements and is a key component of an effective Operations Management System. IntelaTrac is a suite of tools to assist operators, field engineers and supervisors to create inspection and regulatory procedures, assign, schedule and execute rounds and report back findings with assigned levels of criticality and severity.

IntelaTrac is comprised of integrated modules to deliver best practices and collect data to ensure plant tasks and goals are efficiently executed in the field and in your decision support systems.

A Best Practice Repository

IntelaTrac provides the capabilities for Operations Supervisors to create and define procedures based on best practices as well as regulatory compliance rules and regulations. Procedures are re-usable across many operator rounds to ensure that inspections are performed on a routine basis as mandated by overall corporate policies as well as regulatory agencies.

IntelaTrac Scheduler provides a calendar based view to schedule procedures along with the capabilities to view all the necessary statistical details behind every procedure. In addition, it allows the Operations Supervisor to balance workloads by rounds, tasks, time to complete and users to ensure that operators have adequate workloads.

Mobile Field Applications

Mobile IntelaTrac provides a closed loop capability to enable the execution of operator rounds, safety and regulatory inspections and data collection from within an intuitive and contextual user interface on a handheld device. The application is question oriented, which helps users uncover hidden bottlenecks and identify problems in a timely manner.

Meanwhile, users are provided with focused advice messages that enable them to react to any problems faced in the field without any dependencies on the back office. The captured data is then synchronized with IntelaTrac and the corresponding decision support and ERP systems for further reporting and analysis.

Comprehensive Reporting & Analytics

IntelaTrac Reporting and Analytics provides the capability to configure, define and execute required reports to measure operators' performance, view exceptions, determine severities and decide on follow up actions. It also enables users to view trends to quickly identify foreseeable problems and proactively resolve them.

Business Analyst Tools

IntelaTrac business analytics tools, such as Auditor Plus, allow users to monitor and analyze scheduled and completed rounds to determine bad actors, view notes provided by mobile users, view virtual

logs and monitor exceptions reporting. As part of the overall process, the user can also approve, edit and disapprove submitted rounds as necessary and determine delays in rounds' execution to ensure improved compliance.

Enterprise Ready Integration Capabilities

IntelaTrac is a key component of any Operations Management System to provide a critical framework for procedure building and execution to ensure that an organization is fulfilling its objectives by executing all required tasks when required. Therefore, IntelaTrac uses its integration layer to interface seamlessly with market leading ERP systems, such as SAP, to provide measurement point readings and issue notification requests, with market leading data historians such as PHD (Honeywell), PI (OSISoft) and others, to feed required data points, and with CMMS systems such as Maximo, Meridium, and TabWare.

Robust Framework

IntelaTrac software may be used across all organizational functions and is not a limited "point solution." IntelaTrac enhances human work flow across your business functions. Mobile Manager's synchronization technology bidirectionally and seamlessly manages data between connected and disconnected mobile computers through utilization of an advanced synchronization mechanism.

The IntelaTrac system is powered by proven, scalable and robust Microsoft technology, that is especially dependable for the targeted environments. Process-oriented organizations drive value by improving their business processes and asset performance.

IntelaTrac runs on smartphones, PDAs, rugged handheld computers, laptops and PCs.

Adopted by Industry Leaders

IntelaTrac has been deployed by industry leaders such as ExxonMobil, BP, Celanese, Chevron, LyondellBasell, Reliant Energy and Valero Energy to deliver proven results:

- Better operational performance through improved reliability
- Auditable and cost effective Health-Safety-Environmental compliance
- Mobile learning on-the-job
- Consistent execution of Best Practices by the mobile workforce

Join the Mobile Revolution

* Presupposes that engagement is fully scheduled and that all pre-requisites are met.

"It is evident that we chose the right technology provider based on the excellent workmanship and service and support they provide."

- Gerald Bru
LyondellBasell

About Wonderware

Wonderware Mobile Solutions is the leader in integrated Mobile Workforce and Decision Support System solutions for process manufacturing industries. Our solutions help process-intensive industries improve asset reliability, safety and worker productivity, resulting in sustainable benefits across plant functions.
